

Reproducible Omics Evidence Audit — Dashboard (GSE25055 discovery; GSE25065 same-study-family validation)
Methodology/audit, not biomarker discovery

1. Single-seed leakage gap (95% CI)

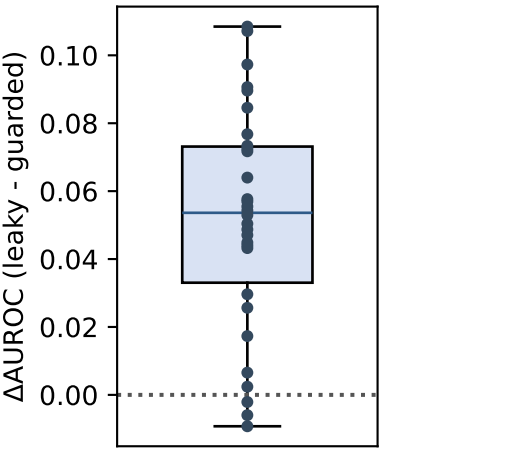

CI includes zero in this single cohort

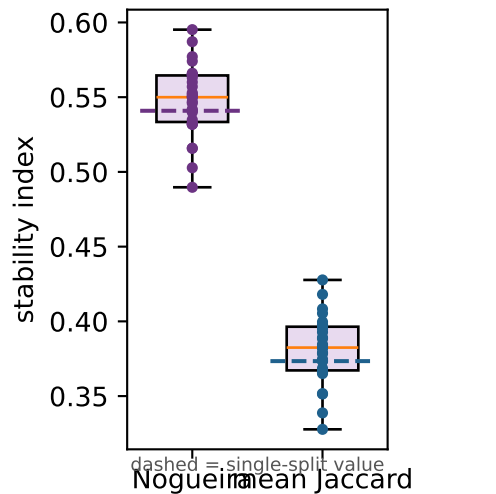

2. Permutation null, B=1000 (diagnostic of leakage artifact)

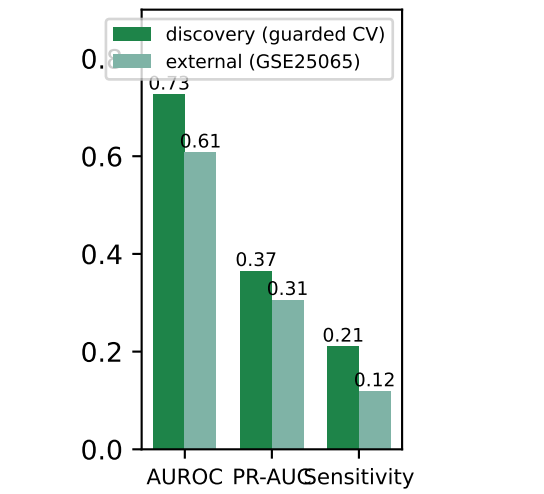

3. 30-seed leakage gap (modest but reproducible; 27/30 > 0)

4. Feature stability across 30 seeds (moderate feature stability)

5. Same-study-family external validation (transportability drop, not leakage)

6. Reproducibility & audit status

- Reproducibility & audit status**
- ✓ Bootstrap CIs (scripts/07_bootstrap_ci.R)
 - ✓ Permutation control B=1000 (08)
 - ✓ Repeated nested CV, 30 seeds (09)
 - ✓ Evidence-audit artifact (10)
 - ✓ Fixed seeds, committed outputs
 - ✓ Frozen external model (C=0.25, thr 0.5)

Framing: within-cohort, diagnostic.
Not biomarker discovery.
